Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which CC involves contacting them with naphthalene, biphenyl, phenanthrene, CC indene, and 1,2-dihydronaphthalene respectively. The polypeptides and CC the host cells are also useful for preparing 1,2-dihydroxy-1,2-CC dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydroxy-1,2-CC divolves contacting them with phenanthrene. The polypeptides and the CC involves contacting them with phenanthrene. The polypeptides and the CC comparing such as indene, 1,2-dihydronaphthalene, oxidise an CC aromatic compound such as indene, 1,2-dihydronaphthalene, CC decaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, CC dibenzothiophene, 9,10-dihydroanthracene, phenanthrene, dibenzofuran, CC dibenzothiophene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a CC corresponding dihydro dihydroxy compound. The polypeptides and the host CC cells are useful for preparing chiral diols for use in the polymer, CC resin, pharmaceutical or rubber industry. The present sequence represents a phthalene dioxygenase (NDO) mutant alpha subunit, given in the Cx exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches 449;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a naphthalene dioxygenase (NDO) or NI related complex (I) comprising several polypeptides which contain an alpha subunit that contains substituted any appropriate subunit that contains substituted any positions. The polypeptides and host cells are useful for preparing (-)-(1S,2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (1S,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydrodiol, cis-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel naphthalene dioxygenase mutant having a specific substitution for preparing chiral diols for use in the pharmaceutical or rubber industry and for carrying out
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pseudomonas sp. strain NCIB 9816-4; naphthalene dioxygenase; NDC inducible multi-component enzyme; alpha subunit; mutant; chiral polymer; resin; pharmaceutical; rubber industry; bioremediation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            맑
The present invention describes a naphthalene dioxygenase (NDO) or NI related complex (I) comprising several polypeptides which contain an alpha submit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing (-)-(1S,2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (1S,2R)-cis-phenanthrene-1,2-dihydronaphthalene, which involves contacting them with naphthalene, biphenyl, phenanthrene, indene, and 1,2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,
                                                                                                                                                                                                                                                                                                                                       Novel naphthalene dioxygenase mutant having a specific amino aci substitution for preparing chiral diols for use in the polymer, pharmaceutical or rubber industry and for carrying out bioremedi
                                                                                                                                                                                                                                                                             Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                      N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (IOWA)

The polypeptides and the hos cells are useful for preparing chiral diois for use in the polymer, resin, pharmaceutical or rubber industry. The present sequence represe a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        involves contacting them with phenanthrene. The polypeptides and host cells are also used in bioremediation in which they oxidise aromatic compound such as indene, 1,2-dihydronaphthalene,

```
CC related complex (I) comprising several polypeptides which contain an CC alpha subunit that contains substituted amino acids at specific CC positions. The polypeptides and host cells are useful for preparing CC (-)(1S,2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3,4-CC dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which CC involves contacting them with naphthalene, biphenyl, phenanthrene, CC indene, and 1,2-dihydronaphthalene respectively. The polypeptides and CC the host cells are also useful for preparing 1,2-dihydroxy-1,2-CC dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which CC involves contacting them with phenanthrene. The polypeptides and CC the host cells are also useful for preparing 1,2-dihydroxy-1,2-CC dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which CC involves contacting them with phenanthrene. The polypeptides and the host cells are also used in bioremediation in which they oxidise an CC aromatic compound such as indene, 1,2-dihydronaphthalene, cells are also used in bioremediation in which they oxidise an CC accorresponding dihydro dihydroxy compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, cells are useful for preparing chiral diols for use in the polymer. CC cells are useful for preparing chiral diols for use in the polymer, cells are useful for preparing chiral diols for use in the polymer. CC anaphthalene dioxygenase (NDO) mutant alpha subunit, given in the CC exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                    C(-)-(15.2R)-cis-naphthalene dihydrodiol, (- or +)-cis-bibhenyl-3,4-cidihydrodiol, (15.2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which cidihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which involves contacting them with naphthalene, biphenyl, phenanthrene, cidihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes a naphthalene dioxygenase (NDO) or NDO related complex (I) comprising several polypeptides which contain an alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC The present invention describes a naphthalene dioxygenase (NDO) or NDO CC related complex (I) comprising several polypeptides which contain an CC alpha subunit that contains substituted amino acids at specific CC positions. The polypeptides and host cells are useful for preparing CC (-)-(15.2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3.4-CC dihydroxyindan, 12-dihydroxy-1,23.4-tetrahydroxphthalene, which CC involves contacting them with naphthalene, biphenyl, phenanthrene, CC indene, and 1,2-dihydroxphthalene respectively. The polypeptides and CC the host cells are also useful for preparing 1,2-dihydroxy-1,2-CC dihydroxphenanthrene or 3,4-dihydroxy-3,4-dihydroxphenanthrene which CC involves contacting them with phenanthrene. The polypeptides and the CC host cells are also used in bioremediation in which they oxidise an CC aromatic compound such as indene, 1,2-dihydronaphthalene, of the polypeptides and CC benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1.4)dioxan, CC dibenzothiophene, 9,10-dihydroxpanthracene, dibenzofuran, CC dibenzothiophene, 9,10-dihydroxpanthracene, dibenzofuran, CC dibenzothiophene, 9,10-dihydroxpanthracene, dibenzofuran, CC dibenzothiophene, 9,10-dihydroxpanthracene, of 9,10-dihydroxpananthrene a CC ceresponding dihydro dihydroxy compound. The polypeptides and the host CC cells are useful for preparing chiral diols for use in the polymer, CC anaphthalene dioxygenase (NDO) mutant alpha subunit, given in the CC exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   related complex (I) comprising several polypeptides which contains substituted amino acids at specific alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a naphthalene dioxygenase (NDO) or NDO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim

dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which involves contacting them with naphthalene, biphenyl, phenanthrene, indene, and 1,2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which involves contacting them with phenanthrene. The polypeptides and the host cells are also used in bioremediation in which they oxidise an aromatic compound such as indene, 1,2-dihydronaphthalene, benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1,4)dioxan, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzo(1,4)dioxan, dibenzothiophene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene
                                                                                                                                                                           The present invention describes a naphthalene dioxygenase (NDO) or NE related complex (I) comprising several polypeptides which contain an alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing (-)-(15,2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydrodiol, cis-1,2-
                                                                                                                                                                                                                                                                                                                                                                                                                       WPI;

The polypeptides and the cells are useful for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry. The present sequence repr a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the exemplification of the present invention.
                                                                                                                                                              Pseudomonas sp. strain NCIB 9816-4; naphthalene dioxygenase; NDO; inducible multi-component enzyme; alpha subunit; mutant; chiral d polymer; resin; pharmaceutical; rubber industry; bioremediation.

Novel naphthalene dioxygenase mutant having a specific amino acid substitution for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry and for carrying out bioremediation pharmaceutical or rubber industry and for carrying out bioremediation pharmaceutical or rubber industry and for carrying out bioremediation pharmaceutical or rubber industry and for carrying out bioremediation pharmaceutical or rubber industry and for carrying out bioremediation involves complex (1) comprising several polypeptides which contain an alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing (-)-(15,2R)-cis-naphthalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which involves contacting them with naphthalene, biphenyl, phenanthrene, and 1,2-dihydronaphthalene, and 1,2-dihydronaphthalene, and 1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-

                                                                                                            В
                                                                                                                                                                                Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which involves contacting them with naphthalene, biphenyl, phenanthrene, indene, and 1,2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which involves contacting them with phenanthrene. The polypeptides and the host cells are also used in bioremediation in which they oxidise an aromatic compound such as indene, 1,2-dihydronaphthalene, benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzofuran, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, dibenzothiophene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, cresin, pharmaceutical or rubber industry. The present sequence represents a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the cemplification of the present invention.
                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               240
```

The present invention describes a naphthalene dioxygenase (NDO) or Net lated complex (I) comprising several polypeptides which contain an alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing (-)-(1.5,2R)-cis-naphthalene dihydrodiol, (-0-+)-cis-biphenyi-3,4-dihydrodiol, (15,2R)-cis-phenanthrene-1.2-dihydrodiol, cis-1.2-dihydrodiol, (15,2R)-cis-phenanthrene-1.2-dihydrodiol, cis-1.2-dihydrodiol, (15,2R)-cis-phenanthrene-1.2-dihydrodiol, cis-1.2-dihydrodiol, (15,2R)-cis-phenanthrene-1.2-dihydrodiol, cis-1.2-dihydrodiol, cis-1.2-dihydrodiol, cis-1.2-dihydrodiol, cis-1.2-dihydrodiol, cis-1.2-dihydrodiol, cis-1.2-dihydrodiol, cis-1.2-dihydrodiol, cis-1.2-dihydrodiol, cis-1.2-dihydrodiol, cis-1.2-dihydrodiol

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                aromatic compound such as indene, 1,2-dihydronaphthalene, benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1,4)dioxan, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, dibenzothiophene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry. The present sequence represents a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the exemplification of the present invention.

involves contacting them with naphthalene, biphenyl, phenanthrene, clindene, and 1,2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-cc dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which clinvolves contacting them with phenanthrene. The polypeptides and the close cells are also used in bioremediation in which they oxidise an index cells are also used in bioremediation in which they oxidise an cc aromatic compound such as indene, 1,2-dihydronaphthalene, cells are useful for preparing fluorene, dibenzofuran, cc dibenzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzofuran, cc dibenzochiophene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host cc cells are useful for preparing chiral diols for use in the polymer, cresin, pharmaceutical or rubber industry. The present sequence represents a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the cc exemplification of the present invention.
                                                                                    Query Match

cc dihýdroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which crimvolves contacting them with naphthalene, biphenyl, phenanthrene, cc indene, and 1,2-dihydronaphthalene respectively. The polypeptides and cc indene, and 1,2-dihydronaphthalene respectively. The polypeptides and cc dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydroxy-1,2-c dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which convolves contacting them with phenanthrene. The polypeptides and the host cells are also used in bioremediation in which they oxidise an convolve compound such as indene, 1,2-dihydronaphthalene, oxidise an convolve cells are anotheracene, phenanthrene, dibenzo(1,4)dioxan, compound, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     related complex (I) comprising several polypeptides which contain an alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing (-)-(15,2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydrodiol, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 13; Page 104-105; 151pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel naphthalene dioxygenase mutant having a specific amino acid substitution for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry and for carrying out bioremediation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a naphthalene dioxygenase (NDO) or NDO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 2000-452174/39.
